

“My Dream”

Since I was young, I had a dream to be a pilot. When I was 9 years old, I always thought about unique things that never happened in my family. I’m the only person who had this dream in my family.

One day I was playing with my friends in the garden of my house. I got tired and decided to lay on the grass. The moment I lay on the grass, I saw an airplane in the sky. The plane was very high, it was touching the sky and from that day I decided to be a pilot. After some years, I started work hard. Then, we came in Spain. I get really serious about this. Many people and teachers told me it’s very difficult. You must work hard. Also, some people tried me to drop down, but I was adamant on my decision. My mom told me that nothing is impossible until we don’t try those things. Just from my mom’s words, I never get much stress.

Now I'm working hard for this. I just try to get good marks, but I am getting some problems. The main thing is my course is very expensive. The second one is physics, but I'm trying my best. Sometimes I just thought to give up, but my mind and heart don’t let me do this. Moreover, my mom. She is my backbone. She always inspires me with her stories of her life. She told me that she wanted to study more, but because of some family issues, she couldn’t study. Outside of it, she always tried to study by herself also by her friends. She told me if she can do this, why can’t I? From her, I get some positive vibes.

In conclusion, I just want to say never give up. If you start to give up and get lots of stress, just talk to your parents or share your issues with somebody who can explain you better. You will feel better. If your dreams are strong, and you have those guts to complete your dream definitely, you will complete it without any doubt. Always do what do you want, never do things that others want because it’s your life. Never let people decide your decisions. Do things that make you happy.

“start where you are
Use what you have
Do what you can”
